## 1 Introduction

This document presents ISMA-B-FCU device hardware information.

### 1.1 Document change log

V1.1 - iSMA-B-FCU-LL hardware description added

### 1.2 Safety rules

- Please note: incorrect wiring of this product can cause its' damage and may result in other hazards. Make sure the product has been correctly wired before turning the power ON.
- Before wiring, or removing / mounting the product, be sure to turn the power OFF. Failure to do so might cause electric shock.
- Do not touch electrically charged parts such as the power terminals. Doing so might cause electric shock.
- Do not disassemble the product. Doing so might cause electric shock or faulty operation.
- Use the product within the operating ranges recommended in the specification (temperature, humidity, voltage, shock, mounting direction, atmosphere etc.). Failure to do so might cause fire or faulty operation.
- Tighten the wires firmly to the terminal. Insufficient tightening of the wires to the terminal might cause fire.

### 1.3 Technical specifications

| Power supply |  | iSMA-B-FCU-HH | iSMA-B-FCU-HL | iSMA-B-FCU-LL |
| :---: | :---: | :---: | :---: | :---: |
|  | Voltage | 230 V AC $\pm 10 \%$ |  | 24 V AC $\pm 10 \%$ |
|  | Power consumption | Max 12VA (Including 7 VA for Triac outputs) |  |  |
| Special Inputs | Temperature input | Measurement with attached RTDs resolution $\pm 0.1^{\circ} \mathrm{C}$ accuracy $\pm 0.2^{\circ} \mathrm{C}$ at $25^{\circ} \mathrm{C}$ |  |  |
|  | Voltage input | Voltage measurement from 0 to 10 VDC (Input impedance $120 \mathrm{~K} \Omega$ ) resolution $\pm 6 \mathrm{mV}$ accuracy $\pm 50 \mathrm{mV}$ |  |  |
|  | Resistance input | Resistance measurement from 0 to $700 \mathrm{k} \Omega$ Measurement resolution $\pm 20 \Omega$ for $20 \mathrm{k} \Omega$ load |  |  |
|  | Dry contact input | Output current $\sim 0.2 \mathrm{~mA}$ |  |  |
|  | Measurement resolution | 12 bits |  |  |
| Digital Inputs | Type | Dry contact |  |  |
|  | Max input frequency | 100Hz |  |  |
| Analog Outputs | Voltage range | 0 to 10 V DC |  |  |
|  | Max. load current | 5 mA |  |  |
|  | Resolution | 12 bits |  |  |
|  | Accuracy | $\pm 7 \%$ |  |  |
| Digital Outputs (relays) | Resistive load (FAN, CTG) | 6 A at 230 V AC or 6 A at 30 V DC |  |  |
|  | Inductive load AC3 <br> (FAN, CTG) | 75 VA at 230 VAC or 10 W at 30 V DC |  |  |
|  | Resistive load (HTG) | 10 A at 230 V AC or 10 A at 30 V DC |  |  |
|  | Inductive load AC3 (HTG) | 1/2 HP at 230 V AC |  |  |
| Triac Outputs | Load | Min: 20 mA Max: 0.5 A at 230 V AC | $\begin{gathered} \text { Min: } 20 \mathrm{~mA} \\ \text { Max: } 0.3 \mathrm{~A} \text { at } \\ 24 \mathrm{~V} \text { AC } \\ I_{\text {max }}=0.3 \mathrm{~A}= \\ I_{\text {Toi }}+I_{\text {To2 }}+I_{\text {24Vout }} \end{gathered}$ | $\begin{gathered} \text { Min: } 20 \mathrm{~mA} \\ \text { Max: } 0.5 \mathrm{~A} \text { at } 24 \mathrm{~V} \\ \text { AC } \end{gathered}$ |
|  | Peak load per channel | 1.5 A (30 s) |  |  |
|  | Gate Control | Zero crossing turn ON |  |  |
|  | Frequency Range | 47 to 63 Hz |  |  |
|  | Snubber | Snubberless Triac |  |  |
| Power Supply output | Power Supply output | $\begin{gathered} 24 \vee \mathrm{AC} \pm 20 \% \\ 7 \mathrm{VA} \end{gathered}$ | $24 \text { V AC } \pm 20 \%, 7 \text { VA* }$ <br> * In HL this Power Supply is also used for Triac Outputs |  |
| RS485 | RS485 | Up to 128 devices |  |  |

| Interface |  | Failsafe Receiver (Bus Open, Bus Shorted, Bus Idle) |
| :---: | :---: | :---: |
|  | Communication protocols | Modbus RTU, Modbus ASCII or BACnet MSTP set by switch |
|  | Baud rate | From 2400 to 115200 set by switch |
|  | Address | 0 to 255 set by DIP switch |
| RJ12 Interface | RS485 | Up to 128 devices |
|  | Communication protocol | Modbus RTU |
|  | Baud rate | From 2400 to 115200 |
|  | Power supply | 34 V DC $\pm 15 \%$, 2.5 W |
| USB | USB | Mini USB 2.0 |
| Ingress protection | IP | IP40 |
| Temperature | Storage | $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ |
|  | Operating | $0^{\circ} \mathrm{C}$ to $+50^{\circ} \mathrm{C}$ |
| Humidity | Relative | 5 to 95\% |
| Connectors | Inputs / Outputs, Power Supply and Communication | Removable |
|  | HTG Relay | Constant |
|  | Maximum cable size | $1.5 \mathrm{~mm}^{2}$ |
| Dimensions | Width | 123 mm |
|  | Length | 137 mm |
|  | Height | 55 mm |

Table 1 Technical specification

### 1.4 Dimensions

Figure 7 iSMA-B-FCU dimensions (all versions)

## 2 Hardware specification

### 2.1 Terminals and internal connection diagram

There are 3 types of hardware available:

- iSMA-B-FCU-HH with 230 V AC power supply and Triac Outputs,
- iSMA-B-FCU-HL with 230 V AC power supply and 24 V AC Triac Outputs,
- iSMA-B-FCU-LL with $24 \vee$ AC power supply and Triac Outputs.

### 2.1.1 iSMA-B-FCU-HH

iSMA-B-FCU-HH has a high voltage power supply ( 230 V AC) and high voltage Triac Outputs ( 230 V AC). The Triac Outputs are connected directly to the main controller power supply as presented in diagram below. The maximum current for each Triac Output is 0.5 A. The maximum power consumed by external equipment connected to the 24 V terminals (L2, N2) cannot exceed 7VA in total.

Figure 2 iSMA-B-FCU-HH diagram of terminals and internal connections

### 2.1.2 iSMA-B-FCU-HL

iSMA-B-FCU-HL has a high voltage power supply ( 230 V AC) and low voltage Triac Outputs ( 24 V AC). The Triac Outputs are connected to a built-in 24 V AC transformer as shown in the below diagram. The maximum power consumed by the external equipment connected to the Triac Outputs and to 24 V terminals (L2, N2) cannot exceed 7 VA in total.

Figure 3 iSMA-B-FCU-HL diagram of terminals and internal connections

### 2.1.3 iSMA-B-FCU-LL

iSMA-B-FCU-LL has a low voltage power supply and Triac Outputs ( 24 V AC). The Triac Outputs are connected to power supply terminals. The maximum current for each of the Triac Outputs is 0.5 A . The maximum power used by external equipment connected to the 24 V terminals ( $\mathrm{L} 2, \mathrm{~N} 2$ ) cannot exceed 7 VA in total.

Figure 4 iSAM-B-FCU-LL diagram of terminals and internal connections

### 2.2 Power supply connection

iSMA-B-FCU-HH and iSMA-B-FCU-HL are designed to work with 230 V AC power supply. Each ISMA-B-FCU device is equipped with a built-in 6 A fuse protecting the controller and connected 230 V AC equipment.

Figure 5230 V AC Power supply connection
iSMA-B-FCU-LL is designed to work with 24 V AC power supply. The device is equipped with a builtin 6 A fuse protecting the controller and connected 24 V AC equipment.

Figure 624 V AC Power supply connection
Note: Total current for digital relay outputs 01-04 cannot exceed 6A.
Note: It is forbidden to use a fuse with current exceeding 6 A! Higher current may permanently damage the device and cause danger to the user and to the equipment!

### 2.2.1. 24 V AC power supply for external equipment

iSMA-B-FCU-HH is equipped with a 24 V AC, 7 VA power supply output to supply an external equipment like sensors and actuators. This power supply uses a separate coil in the transformer. 24 V AC power supply terminal connection is labeled L2, N2.
iSMA-B-FCU-HL is equipped with a 24 V AC power supply output for thermal valves controlled by Triac Outputs and external devices like sensors and actuators. This power supply uses a separate coil in the transformer. 24 V AC power supply terminal connection is labeled $\mathrm{L} 2, \mathrm{~N} 2$. The total power
consumption with thermal valves and external devices cannot exceed 7 VA ( $\sim 0.3 \mathrm{~A}$ ).
iSMA-B-FCU-LL is equipped with a 24 V AC, 7 VA power supply output to supply the external equipment like sensors and actuators. This power supply uses a separate 24 V AC transformer. The external separate power supply terminal connection is labeled L2, N2.

### 2.3 Connecting the communication bus (RS485)

Figure 7 RS485 connection

### 2.3.1 RS485 grounding and shielding

This device can be exposed to electromagnetic field. Electromagnetic radiation can induce electrical noise into both power and signal lines, as well as direct radiation into the FCU device with negative results for the system. Appropriate grounding, shielding and other protective steps should be taken at the stage of installation to prevent these effects. These protective steps include grounding the control cabinet and the cable shield, installing protective elements for electromagnetic switching devices, correct wiring, as well as proper choice of cable types and their cross sections.

### 2.3.2 RS 485 network termination

Transmission line effects often present a problem for data communication networks. These problems include reflections and signal attenuation.

To eliminate the presence of reflections of signal from the end of the cable, the cable must be terminated at both ends with a resistor across the line adequate to its characteristic impedance. Both ends must be terminated since propagation is bidirectional. In case of an RS485 twisted pair cable this termination is typically $120 \Omega$.

### 2.4 RJ12 Panel connection

RJ12 socket is designed for connecting external modules and LCD panel. The ISMA-B-FCU device has two parallel sockets with the same pin configuration. Those sockets provide communication in Modbus RTU protocol.

RJ12 socket provides also power supply dedicated for external LCD panels with maximum load up to 2.5 W . Before connecting devices powered from RJ12 please calculate the power supply load. Power consumption of the dedicated wall panel iSMA-B-LP with temperature sensor is 0.5 W , so the maximum number of panels on the bus is 5 .

RJ12 pins are shown in the figure below.

Figure 8 RJ12 pin description
For short distance, up to 100 m , it is recommended to use the following cables for connection: standard category 3, 4 wire or 6 wire telephone cable straight without crossing (for example YTLYP $6 \times 0.12$ ). For longer distance, it is recommended to use twisted shielded Modbus standard cable.

### 2.5 Mini USB Port

The iSMA-B-FCU device has a built-in mini USB port designed to manage controller firmware and application, as well as for diagnostics.

This USB port also provides controller power supply for commissioning processes and for application diagnostics. When the controller is powered up by a USB, all inputs and outputs are operational (except for Triac Outputs which require external power supply).

### 2.6 Front panel LED functions

The ISMA-B-FCU device is equipped with 4 LED diodes for quick status check and diagnostics:

- Power LED lights up (green) after turning the power on.
- Communication LED lights up (orange) for 20 ms after sending each package through the main RS485 port. As long as module receives/sends packages, the Communication LED blinks continuously.
- Extension Communication LED lights up (orange) for 20 ms after sending each package through the extension ports. As long as the module receives / sends packages, the Extension Communication LED blinks continuously.
- User LED is OFF as default, the function is programmable through LED_ALARM component; it blinks very softly when there is a fault during the start-up of Sedona virtual machine.
- During device reset, when Switch 6 in DIP switch PROTOCOL is in ON position (default settings restoration mode), Power LED blinks in 300 ms time intervals. After Switch 6 is switched OFF, Power LED is lit permanently and the default settings are restored.
- When the device remains in bootloader status, the Power LED and the Communication LED blink alternatively. The communication LED keeps its functionality and blinks also after sending/receiving data packages.

### 2.7 Setting Controller Address

The Controller Address is a setting made with a Dip switch MAC. The procedure of setting the address in presented in the figure and table below. The addressing table is shown at the end of this document.

Figure 9 MAC Dip Switch

| Number of Dip Switch MAC | Position | Function |
| :---: | :---: | :---: |
| 1 | On | Add 1 to MAC Address |
|  | Off | Add 0 to MAC Address |
| 2 | On | Add 2 to MAC Address |
|  | Off | Add 0 to MAC Address |
| 3 | On | Add 4 to MAC Address |
|  | Off | Add 0 to MAC Address |
| 4 | On | Add 8 to MAC Address |
|  | Off | Add 0 to MAC Address |
| 5 | On | Add 16 to MAC Address |
|  | Off | Add 0 to MAC Address |
| 6 | On | Add 32 to MAC Address |
|  | Off | Add 0 to MAC Address |
| 7 | On | Add 64 to MAC Address |

|  | Off | Add 0 to MAC Address |
| :---: | :---: | :---: |
| 8 | On | Add 128 to MAC Address |
|  | Off | Add 0 to MAC Address |

Table 1 Setting MAC address with a Dip Switch
Example: Configuration setting of the ISMA-B-FCU device address 83.
Address 83 contains following multiplicity of number $2: 83=1+2+16+64$. Address DIP switch settings are presented in the table below. All addresses of DIP switch configuration are presented in the table at the end of this document.

| Address | S1 | S2 | S3 | S4 | S5 | S6 | S7 | S8 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 83 | On | On |  |  | On |  | On |  |

Table 2 Address 83 DIP switch configuration

## MAC

Figure 10 MAC DIP switch address 83 settings
WARNING! In BACnet network setting, the address above 128 automatically switches BACnet to Slave mode. In this mode, the device cannot be discovered in device searching process.

WARNING! Do not set address 255 (all switches in ON position). This address setting is reserved for system operation.

### 2.8 Baud rate selection

Transmission baud rate is determined by S3 switch (sections 1, 2, and 3) in accordance with the following table:

| $\mathbf{1}$ | $\mathbf{2}$ | $\mathbf{3}$ | Baud rate |
| :---: | :---: | :---: | :---: |
| OFF (0) | OFF (0) | OFF (0) | Defined by the user |
| OFF (0) | OFF (0) | ON (1) | 76800 |
| OFF (0) | ON (1) | OFF (0) | 4800 |
| OFF (0) | ON (1) | ON (1) | 9600 |
| ON (1) | OFF (0) | OFF (0) | 19200 |
| ON (1) | OFF (0) | ON (1) | 38400 |
| ON (1) | ON (1) | OFF (0) | 57600 |
| ON (1) | ON (1) | ON (1) | 175200 |

Table 2 Baud rate selection

### 2.9 Protocol selection

Protocol selection is made with sections 4 and 5 of the S3 switch according to the table:

| $\boldsymbol{4}$ | $\mathbf{5}$ | Protocol |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| OFF (0) | OFF (0) | Modbus RTU |  |  |  |
| OFF (0) | ON (1) | Modbus ASCII |  |  |  |
| ON (1) | OFF (0) | BACnet Master |  |  |  |
| ON (1) | ON (1) | BACnet Slave |  |  |  |
| Table 3 Protocol selection |  |  |  |  |  |

WARNING! In BACnet mode switch number 4 must be on $\mathrm{ON}(1)$ position and switch number 5 decides if BACnet works in Master or Slave mode (please check on the above table).

### 2.10 Restoring the default settings

To restore the default ISMA-B-FCU device settings, follow the steps below:

1. Turn power supply off
2. Set section 6 of Protocol switch to ON
3. Turn on power supply, power LED blinking
4. Switch section 6 of Protocol switch to OFF to restore the default settings. To cancel the reset, turn off the power and switch section 6 of Protocol switch to the OFF position.

### 2.11 Default Settings

Out of the box device as well as after restoring default values procedure, has got the following default settings:

| Name | Default Value |
| :---: | :---: |
| USER BAUD RATE | 76800 |
| STOP BITS | 1 |
| DATA BITS | 8 |
| PARITY BITS | 0 |
| RESPONSE DELAY | 0 |
| $11-14$ DIGITAL INPUT COUNTERS | 0 |

Table 4 Default values

### 2.12 CFG DIP switch

The ISMA-B-FCU device has, on the top panel, 8 position DIP switch which can be used in client application. Each of 8 positions can have true or false state. This DIP switch is dedicated for setting configuration in client application.

Figure 11 DIP switch CFG

## 3 ISMA-B-FCU device inputs

ISMA-B-FCU device has two types of inputs: 4 Digital Inputs - for Boolean values, and 4 Special Inputs - for resistance and voltage measurement.

### 3.1 Special Inputs

ISMA-B-FCU device has 4 built-in special inputs which can work in the following modes:

- Digital Input - dry contact,
- Analog Input - 0-10 V DC,
- Resistance Input- 0 - $1000 \mathrm{k} \Omega$ ( $1 \mathrm{M} \Omega$ ),
- Temperature Input - working with NTC sensors.

### 3.1.1 Special Inputs working as digital input

In this mode, Special Input works as a digital input dry contact and reactive Boolean value, false for open circuit and true for close circuit. Circuit status is measured with 1 mA current.

Figure 12 Connection of Special Inputs Dry Contact

### 3.1.2 Special Inputs working as analog input 0-10 V DC

In this mode, Special Input measures voltage in the range from 0 to $10 \mathrm{~V} D C(10000 \mathrm{mV})$ with 6 mV resolution.

Figure 13 Connection of the Special Inputs voltage sensor

### 3.1.3 Special Inputs operating as resistance inputs

In this mode, Special Input measures resistance value with voltage driver. The input works in range from 0 to $1000 \mathrm{k} \Omega(1 \mathrm{M} \Omega)$, with resolution $\pm 20 \Omega$ for $20 \mathrm{k} \Omega$ load.

Figure 14 Connection of Special Inputs resistance sensor

### 3.1.4 Special Inputs working as temperature inputs

In this mode, Special Input measures NTC sensor resistance with voltage driver and converts to temperature value. Special Input is equipped with a built-in conversion table for the following NTC sensors:

- 10K3A1 NTC B=3975K temperature sensor
- 10K4A1 NTC B=3695K temperature sensor
- 10K NTC B=3435K Carel temperature sensor
- 20K6A1 NTC B=4262K temperature sensor
- $\quad 2.2 \mathrm{~K} 3 \mathrm{~A} 1 \mathrm{NTC} \mathrm{B}=3975 \mathrm{~K}$ temperature sensor
- $\quad 3 К 3 A 1$ NTC B=3975K temperature sensor
- 30K6A1 NTC B=4262K temperature sensor
- SIE1 temperature sensor
- TAC1 temperature sensor
- SAT1 temperature sensor

Thermistor Sensor

Figure 15 Connection of Special Inputs NTC sensor

### 3.2 Digital Inputs

ISMA-B-FCU device is equipped with 4 Digital Inputs. The figure below presents the way they are connected.

Output current $\sim 1 \mathrm{~mA}$
Figure 16 Connection of Digital Inputs Dry Contact

### 3.2.1 Digital Input fast counter

Digital Input can work as a counter of dry contact impulses up to 100 Hz . Counter value is saved in non-volatile EEPROM memory.

WARNING! During Restore to Default process, the value of the counter is set to 0 .

## 4 ISMA-B-FCU device outputs

ISMA-B-FCU device is equipped with three types of outputs: 2 Triac Outputs, 5 Digital Outputs, and 4 Analog Outputs.

### 4.1 Triac Outputs

ISMA-B-FCU device is equipped with two Triac Outputs designed for heating and cooling thermal valve actuators. Depending on controller model, Triac Outputs can be connected to actuators with 230 V AC supply (for iSMA-B-FCU-HH) or to actuators with 24 V AC supply (for iSMA-B-FCUHL and iSMA-B-FCU-LL). In iSMA-B-FCU-HL, Triac Outputs are supplied with 24 V AC from a buildin transformer, whereas in iSMA-B-FCU-LL and iSMA-B-FCU-HH Triac Outputs are connected directly to Power Supply terminals.

Triac Outputs can work as typical binary outputs (for Binary Temperature Control) or with PWM modulation. PWM mode has two parameters:

- Duration time in seconds (this value depends on valve parameters)
- $\quad$ Fill out (percentage value of signal fill out).

The figure below presents the way actuators are connected to Triac Outputs (for 4 pipes mode).

Figure 17 Connection between Thermal Valves and Triac Outputs: a) iSMA-B-FCU-HH; b) iSMA-B-FCU-HL, and iSMA-B-FCU-LL

## WARNING!

In case of iSMA-B-FCU-HH or iSMA-B-FCU-LL controller, the actuators connected to each Triac Output may consume up to 0.5 A under constant load. In some cases the current can be higher for a limited time, 1.5 A up to 30 seconds.

In case of iSMA-B-FCU-HL controller, the sum of power consumption of both Triac Outputs and 24 V AC output cannot exceed 0.3 A (7 VA):

$$
I_{\max }=0,3 \mathrm{~A}=I_{\mathrm{TO1}}+I_{\mathrm{TO2}}+I_{24 \mathrm{VOut}} .
$$

### 4.2 Digital Outputs

All Digital Outputs are based on relays which can operate with 230 V AC voltage (in iSMA-B-FCULL, Digital Outputs are working with 24 V AC). ISMA-B-FCU device has 2 types of digital outputs:

- 01-03 and 05 - relay outputs connected directly to power supply terminal,
- 04 - a relay separated from ISMA-B-FCU device circuits.

### 4.2.1 01 - 03 relays "Fan"

ISMA-B-FCU device is equipped with three relay outputs, designed for connecting up to 3 speed Fans. The way the Fans are connected (depending on the number of speeds) is presented in the figure below. The common terminal for those outputs is connected directly to Power Supply "L" terminal.

WARNING! Outputs 01-03 and output 05 are protected by a built-in 6 A fuse. Total current for digital relays outputs 01-03 and 05 cannot exceed 6 A .

WARNING! It is forbidden to use a fuse with current exceeding 6 A! Higher current may permanently damage device and cause danger to the user and to the equipment!

WARNING! In iSMA-B-FCU-LL, 24 V AC Fan motor is required.
An exemplary fan connection is presented in the figure below.

Figure 18 Digital Outputs 01-03, example of fan connections

### 4.2.2 04 - HTG relay "Electrical Heater"

iSMA-B-FCU device is equipped with relay outputs for connecting for example an Electrical Heater. This relay is separated from the rest of the control circuit. Current consumption cannot exceed 10 A with 250 V AC power supply. The figure below presents the way of connecting.

WARNING! HTG relay voltage is always limited to 250 V AC, irrespectively of the power supply version of the FCU controller.

WARNING! This digital output is equipped with a separate circuit with 10 A relay. This circuit requires using external fuse protection up to 10 A . The current higher than 10 A may permanently damage device and cause danger to the user and to the equipment!

Figure 19 Digital Output O4, exemplary Electrical Heater connection

### 4.2.3 05 - CLG relay "Electrical Cooler"

ISMA-B-FCU device is equipped with a relay output, which in FCU application is dedicated to an external Cooler. This relay output is internally connected to the power supply, therefore there is no need to connect external supply. In iSMA-B-FCU-HH and iSMA-B-FCU-HL the output voltage in high state is 230 V AC, and in iSMA-B-FCU-LL version the high state voltage is 24 V AC. Current consumption cannot exceed 6 A . An exemplary way of connecting is presented in the figure below.

WARNING! Output 04 and outputs 01-03 are protected by a 6 A fuse. Total current for digital relay outputs cannot exceed 6A.

WARNING! It is forbidden to use a fuse with current exceeding 6A! Higher current may permanently damage the device and cause a danger to the user and to the equipment!

Figure 20 Digital Output O5, an example of 230 V AC Electrical Cooler connection (iSMA-B-FCU-HH and iSMA-B-FCU-HL version)

Figure 21 Digital Output 05, an example of 24 V AC Electrical Cooler connection (iSMA-B-FCU-LL version)

### 4.3 Analog Outputs

ISMA-B-FCU device is equipped with 3 Analog Outputs 0-10 V DC. Those outputs are designed for controlling the following actuators:

- A1 (HTG) - analog heating valve actuator,
- A2 (CTG) - analog cooling valve actuator,
- A3 (FAN) - analog fan speed control.

The recommended way of connecting the Analog Outputs is presented in the figures below.

Figure 22 Analog Outputs, an exemplary connection of analog 0-10 V valve actuators

Figure 23 Analog Outputs, an exemplary connection of analog 0-10 V fan control

## 5 MAC DIP SWITCH addressing table

| Address | S1 | S2 | S3 | S4 | S5 | S6 | S7 | S8 |
